

Square root of 365

Most homeowners and renters rarely use a square. However, woodworkers, carpenters, and builders use them frequently. Selecting the right one for the job is easy. The main purpose of a square is to ensure that components are perpendicular, or at right angles to each other. In addition, most squares serve as measurement rulers marked in inches, fractional inches, and sometimes in centimeters and millimeters. Large framing squares, also called carpenter squares, are used in building cabinets and homes. Speed squares, sometimes referred to as try squares, are smaller and include additional angles for measurement. Combination squares have a ruler blade with an adjustable sliding stock to measure 90-degree and 45-degree angles. Combination squares include a built-in bubble level that is useful for leveling small components such as picture frames. A combination square is easy to use. Lay the stock against an object edge, then use the nut to loosen and move the ruler as needed. Most combination squares also have a removable pointed pin called a scribe that can be used to mark measurements on the object being squared. Framing and speed squares typically come with instructions for various tasks. Maintaining a square is relatively easy. Most important, do not store it where it can become damaged or bent, as accurate measurement is its primary task. Steel squares should be kept clean and dry so they don't rust. Most framing and speed squares now are made of aluminum and, with care, will be useful for decades. Hand Tools Image Gallery Other handy measurement devices include the tape measure and level. Our review of these techniques will focus on the manual entry of formulas, but check out our tutorial on using Excel if you need a refresher on formula entry for core functions. A function's syntax refers to the layout of the function and includes the function's name, brackets, comma separators, and arguments. These steps apply to all current versions of Excel, including Excel 2019, Excel 2016, Excel 2013, Excel 2010, Excel 2019 for Mac, Excel 2016 for Mac, Excel for Mac 2011, and Excel Online. Calculate a square root. The syntax for the SQRT() function is: =SQRT(number) For this function, you must only supply the number argument, which is the number for which a square root must be found. It can be any positive number or a cell reference to the location of the data in a worksheet. If a negative value is entered for the number argument, SQRT() returns the #NUM! error value--because multiplying two positive or two negative numbers together always returns a positive result, it is not possible to find the square root of a negative number in the set of real numbers. Calculate an nth root. Use the POWER() function to calculate any root value: =POWER(number,(1/n)) For the POWER() function, you'll supply as arguments both the number and its exponent. To calculate a root, simply supply an inverse exponent -- for example, a square root is 1/2. The POWER() function is useful for both powers and exponents. For example: =POWER(4,2) yields 16, whereas: =POWER(256,(1/2)) also yields 16, which is the square root of 256. Roots are the inverse of powers. Find the cube root in Excel. To calculate the cube root of a number in Excel, use the caret operator (^) with 1/3 as the exponent in a simple formula. =number^(1/3) In this example, the formula =D3^(1/3) is used to find the cube root of 216, which is 6. Calculate the roots of imaginary numbers. Excel offers the IMSQRT() and IMPOWER() functions to return roots and powers of imaginary numbers. The syntax of these functions is identical to the real-number versions. Thanks for letting us know! Get the Latest Tech News Delivered Every Day Subscribe Tell us why! A Microsoft Office 365 (now called Microsoft 365) subscription starts at \$70 a year, or you can buy a license for about \$150. But don't worry, you don't necessarily have to pay these prices. It doesn't matter if you need to use it on the go, or on a PC. It doesn't matter if you're going to be using it sparingly, or for 8 hours a day. There are ways you can get Office 365 for free. Use Microsoft Office Online To compete with Google's suite of productivity apps, Microsoft offers an online-only version of its popular Office apps for free. You can use Word, Excel, and PowerPoint in a browser on your Mac, Windows PC, or a Chromebook, entirely for free. While they are not as feature rich as the desktop apps, most of the core functionality is available. The editing features in Word, and functions in Excel are all available in the Office Online experience (in a modern, web-based package). Just open Office.com in your browser and sign in with your Microsoft account. Then, you can create a blank document or start with one of the templates. If you were already working on a document, or if you have received a document that you need to edit, you can easily upload it to Office Online (using drag and drop). Try Office 365 For Free If you only need Microsoft Office for a while (say, if you have college submissions due in a couple of weeks), you can just use the trial version of Microsoft Office. Go to the Microsoft Office for Free website and sign up for the trial. While you'll have to provide a credit card for this, you can cancel the subscription before the month ends. This way, you won't be charged automatically. You can even cancel it right after signing up and continue to use the trial for the rest of the month. The trial will give you access to the Microsoft 365 Home plan (previously known as the Office 365 Home plan). You'll get access to all Office 365 products for free like Word, Excel, PowerPoint, OneNote, Outlook, not to mention 1TB cloud storage space. Once you sign up for Office 365, you'll be able to use the desktop Office apps offline with all the available features. If your month is up, you can sign up again using a different email address to get an extra month (or two). Use Office 365 Mobile Apps For Free Microsoft has a free version of Office available for smartphones and tablets. If your device screen is smaller than 10.1 inches, you can edit Microsoft Office documents for free. This includes 10-inch Android tablets and the 9.7-inch iPad (but not the 10.2-inch 7th-Generation iPad). If your device is larger than 10.1 inches, you'll have to get an Office 365 subscription, or use the read-only mode. Download: Microsoft Office (iOS, Android) Get Office 365 Education Version For Free If you're a student, teacher, or even alumni, you can use the entire offline Microsoft Office 365 suite for free. The catch is that your school or educational institute needs to have an education license. Go to the Office 365 Education page and enter your .edu email address to see if you qualify. If you do, you can download and use all Office apps on your computer. Try The Evaluation Version Microsoft has a separate trial for their business and enterprise users that offers the same Office 365 experience. You can head over to the Microsoft Evaluation Center and sign up for their 30-day ProPlus plan as another way to get the 30 days Office 365 trial. Get Office 365 For Free With a New PC Yes, this is not the most cost-effective option, but if you're shifting to working from home, or if you're in the market for a new PC, you can look for ones that come with a Microsoft Office 365 subscription. You can find Windows laptops that cost less than \$500 that come bundled with a free Office 365 Home plan that can be shared with up to 6 users. Join a Shared Microsoft 365 Home Plan Speaking of the Microsoft 365 Home plan, you can ask around to see if you know anyone that already uses it. If you find a professional or a small business-person who uses the plan, you can ask them to add you to it. Hey, if you can share your Netflix account, why not your Office account too? That way you can split the \$99/year cost between six users. That means you can get the entire Microsoft Office 365 experience for around \$17/year. Now that's a great deal. If you can convince them to add you for free, that's an even better option. Ask Your Employer To Buy It For You If the Microsoft Office suite is important for you to get work done, you can make the case to your employer. Instead of paying for it out of your pocket, you can ask for it to be covered as a company expense. Look For Deals on Shared Subscriptions Microsoft's website is not the only place where you can sign up for an Office 365 subscription. If you monitor the deals, you'll find some discounts for the Office 365 Personal Home plans online. After discounts, you might get the Home plan for around \$80 (\$20 off) from Amazon. When you're looking for these deals, make sure they are from a legitimate site. Don't fall for the eBay sellers that offer Microsoft 365 or Office 365 subscriptions for \$1. They might work for a while, but they are definitely not a legal option. Use Free Office 365 Alternatives Lastly, you don't need to use Microsoft Office to work with Office documents. Instead, you can use the LibreOffice suite for Windows, Mac, and Linux which is a free and open-source alternative to Microsoft Office. Using LibreOffice, you can get a similar offline desktop Office experience where you can create, open, and edit DOCX Word documents, XLS Excel spreadsheets, and PPTX PowerPoint presentations easily. If you want an online alternative to Microsoft Office, you can use Google's suite of productivity apps. Google Docs, Sheets, and Slides supports Microsoft's Word, Excel, and PowerPoint formats respectively. There are many more Microsoft Office 365 alternatives. Take a look at our list of the 6 best Microsoft Office alternatives to learn more. How do you use Microsoft Office suite in your work and personal life? Share with us in the comments below.
